

# Market performance

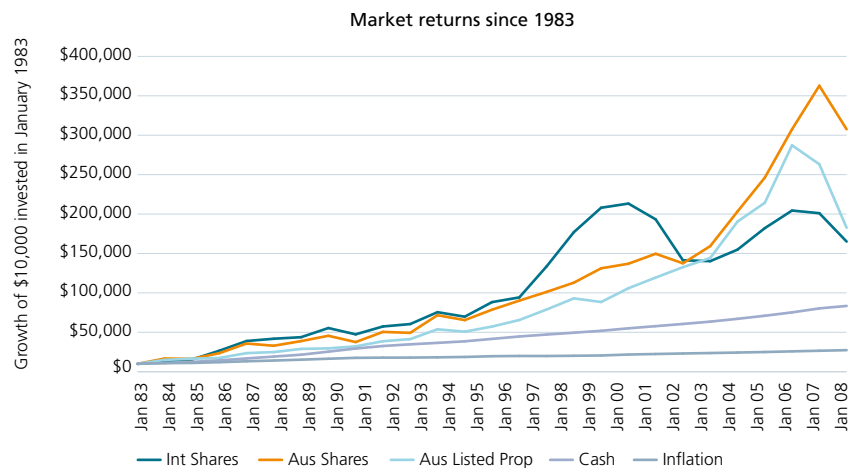

*We see creating and looking after your wealth as a lifelong commitment. That's why we offer regular financial advice and guidance throughout the different stages in your life. Together, we can build the financial wealth that lets you enjoy the truly important things in your life.*

Almost every investor dreams of discovering 'the next big thing', making millions of dollars and living happily ever after.

But unless you have a crystal ball, most of us have to carefully manage our finances and invest in quality companies that produce the most appropriate levels of return, relative to the amount of risk we are willing to take with our money.

To enable you to fulfil your wealth strategy and achieve your financial and lifestyle goals, your Genesys wealth adviser will choose suitable diversified investments to make up your investment portfolio. Diversification helps to reduce the impact of any one investment on your overall returns. This process of diversification spreads your investments across a number of different types of assets, spreading risk and making the most of quality assets.

The long term performance of the share market has shown us that different asset classes perform differently at different times. The above graph shows that when one asset class is performing poorly, another is probably performing well. So by diversifying your portfolio, your Genesys wealth adviser can help prevent your portfolio from being dependent on the performance of a single asset type.

Reading regular market commentaries can also help you to understand the factors that cause asset classes to rise and fall in value. The current month's commentary, as provided by ipac asset management, can be downloaded along with previous editions from our library of useful information.

Please note: Advice contained in this flyer is general in nature and does not consider your particular situation or needs. Please do not act on this advice until its appropriateness has been determined by a qualified adviser.
